Q11. Read the following passage and answer the questions that follow. 10x1=10

A balanced diet is the one which contains fats, carbohydrates, proteins and vitamins in the right proportion required for the maintenance of health. No single article of food gives all of those. We have to mix certain articles in our diet in the right proportion to get a balanced diet. Vitamins are found in fruits, vegetables, cereals, fish, milk and milk products. The absence of any type of vitamin leads to a deficiency disease which may even be fatal. Fats and carbohydrates are found in oil, butter, sugar, starch. Proteins and vitamins are body builders while fats and carbohydrates are energy producers.

- i. What is a balanced diet?
- ii. What causes deficiency diseases?
- iii. Which foods are energy producers?
- iv. What are the sources of vitamins?
- v. Give the meaning of – proportion, deficiency
